# Cost Estimating and Cost Analysis

 Cost estimating and cost analysis are separate functions, but there is an inseparable relationship between them.

#### Cost estimating

- ✓ is the process of predicting or forecasting the cost of work of an activity or work output
- ✓ depends on inputs from cost analysis activity
- ✓ is essentially a look forward into future occurrences

### Cost analysis

- ✓ is the process of studying and organizing past costs and future estimates
- ✓ is primarily a view into the past with an eye towards the future

### **Basic Cost Terms**

#### Fixed Cost

- ✓ cost that is constant over a range of output
- ✓ E.g. rent, tax, permit/license, PCB design, master mold making and software development can be classified as fixed costs

#### Variable Cost

- ✓ cost that changes according to level of activity
- ✓ direct labour and direct material are variable costs
- ✓ E.g. Ingredient and material cost

#### Direct Cost

- ✓ cost that is attributed directly to a specific output
- ✓ E.g. labour cost, purchasing cost, etc.

#### Indirect Cost

- ✓ cost that is difficult to allocate to a specific work activity
- ✓ terms of overhead, indirect cost and burden are used interchangeably
- ✓ E.g. utility cost, equipment maintenance and facility rental
- Overhead Costs consist of all costs of manufacturing other than direct material and direct labour, including indirect labour and indirect material.

### **Basic Cost Terms**

### Recurring Cost

- ✓ cost that is repetitive over a range of activities
- ✓ E.g. Material cost, labour cost

### Non-recurring Cost

- ✓ cost that is non-repetitive
- ✓ E.g. PCB design, master mould making and software development are non-recurring costs

#### Sunk Cost

- cost that has occurred in the past and has no relevance to estimates of future cost
- ✓ E.g. Investment in machine

### Opportunity Cost

- ✓ cost of forgoing best rejected alternative
- E.g. opportunity cost of going for further studies is income from working

### Life Cycle Cost

- sum of all costs, both recurring and non-recurring, related to a product or system during its life span
- E.g. Research and development, project, production, customer service and warranty maintenance

### **Conventional Costing**

- The conventional method of cost accounting assigns or allocates the factory's indirect costs to the items manufactured on the basis of volume such as the number of units produced, the direct labour hours, or the production machine hours.
- Example below is shown using direct labour hours.
  - > Total Cost include direct material, direct labour and overhead costs
  - Overhead Costs typically allocated based on
    - Direct Labour Hours
    - Direct Labour Dollars

#### Example:

Overhead Cost allocated based on Direct Labour Hours Total Overhead Cost = \$5000

Product A: Direct Labour Hours = 100 Hours Product B: Direct Labour Hours = 150 Hours

Overhead Cost allocated to Product A = 
$$\left(\frac{100}{100+150}\right)$$
 \* \$5000 = \$2000

Overhead Cost allocated to Product B = 
$$\left(\frac{150}{100+150}\right)$$
 \* \$5000 = \$3000

### Limitations of Conventional Costing

- Conventional costing is not accurate to assume direct labour is the main cost contributor
  - Tremendous change in manufacturing and service industries.
  - Decrease in amount of direct labour usage.
  - Significant increase in total overhead costs.
- May be inappropriate to use plant-wide predetermined overhead rates based on direct labour or machine hours when a lack of correlation exists.
- Complex manufacturing processes may require multiple allocation bases.

# **Activity Based Costing**

- Activity Based Costing (ABC) is an overhead cost allocation system that
  - Allocates overhead to multiple activity cost pools and
  - Assigns the activity cost pools to products or services by means of cost drivers that represent the activities used.
- More accurate product costing compared to conventional costing
- Time consuming to identify cost drivers

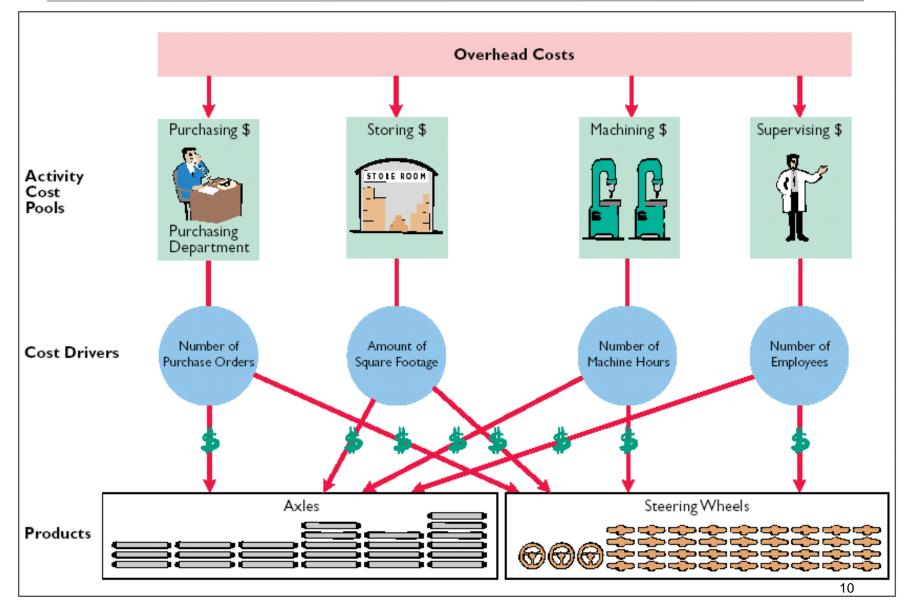

# **Activity Based Costing**

- Activity Based Costing is designed to associate costs with activities that drive them. ABC allocates overhead costs in two stages:
  - Stage 1: Overhead costs are allocated to activity cost pools.
  - Stage 2: The overhead costs allocated to the cost pools are assigned to products using cost drivers.
- Activity: any event, action, transaction, or work sequence that causes a cost to be incurred in producing a product or providing a service.
- Activity Cost Pool: cost associated with a distinct type of activity.
  - For example: machining cost, energy cost, ordering materials cost or setting up machines cost.
- Cost Drivers: any factors or activities that have a direct causeeffect relationship with the resources consumed.
  - For example, Machine Hours, Electricity Hours.

# Activity Based Costing – An Example

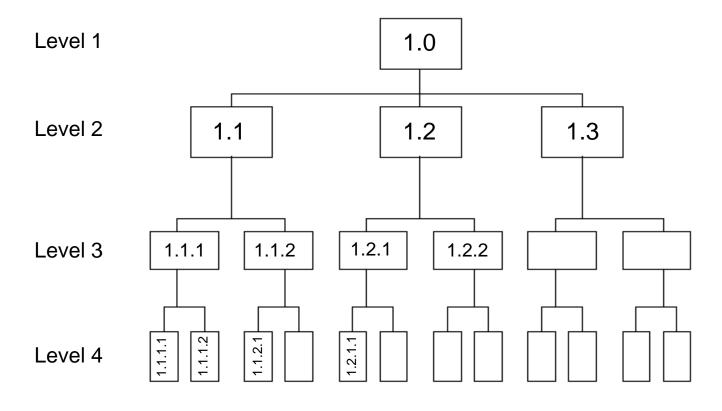

# Work Breakdown Structure (WBS)

- WBS is a basic tool of project management used in engineering economic analysis
- WBS serves as a framework for
  - 1. Defining all project work elements and their relationships
  - 2. Collecting and organizing information
  - 3. Developing relevant cost and revenue data
  - 4. Integrating project management activities
- WBS ensures that all work elements are included. It helps to eliminate duplications and avoid nonrelated activities.

# Example: A Four-Level WBS

| Level number | Breakdown         | Common term                      |
|--------------|-------------------|----------------------------------|
| 1            | Total Job         | Project, product,process,service |
| 2            | Major subdivision | System or primary activity       |
| 3            | Minor subdivision | Subsystem or secondary activity  |
| 4            | Tasks             | Major components or tasks        |
| 5            | Subtasks          | Subcomponents, parts or subtasks |

# Applying WBS to Cost Computation

| System A         \$678           System B         \$600           System C         \$900           System A         \$572           Sub system A-1         \$572           Sub system A-2         \$106           Sub system A-1         QTY         COST         TOTAL           Component 1         1         \$10         \$10           Component 2         5         \$50         \$250           Component 3         2         \$34         \$68           Component 4         1         \$117         \$117           Component 5         1         \$59         \$59           Component 6         1         \$68         \$68           Sub system A-2         QTY         COST         TOTAL           Component 2         6         \$2         \$12           Component 2         6         \$2         \$12 | Work Breakdown Structure                            |                      |                     |                       |

# Cost Allocation Methods Comparison

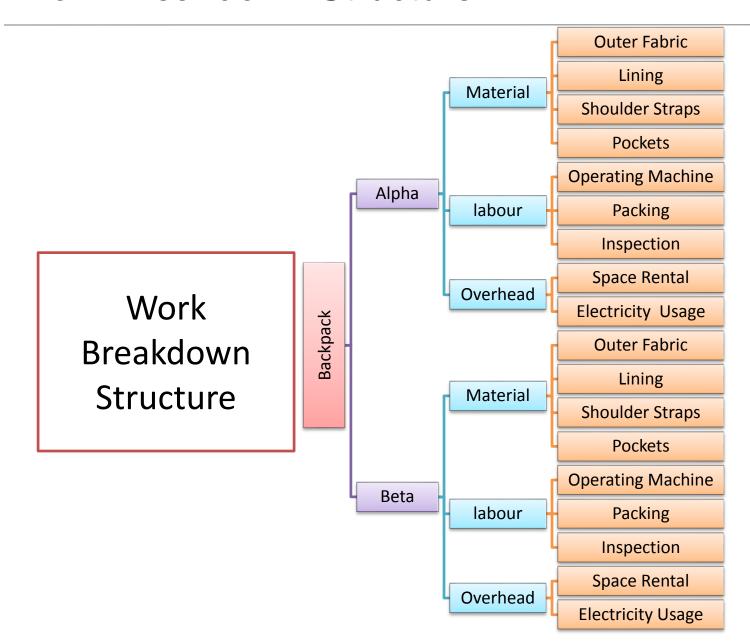

| Conventional Costing                                                                                                                                      | Activity Based Costing                                                                                                                                                    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Focuses on <i>final products or services</i>                                                                                                              | Focuses on <i>process costs</i> and not product costs                                                                                                                     |
| Allocates overhead costs in terms of volume-based indicator or labour hours in production                                                                 | Assumes that not all overhead resources are consumed in proportion to the number of units produced.                                                                       |
| Spread an overhead cost (such as utility expenses or process engineering support) in direct proportion to the volume-based indicator for each cost center | Traces overhead costs back to the activities that consume resources and result in costs. Offers product profitability insights in areas that might cloud product costing. |
| Appropriate for firms where overhead is still primarily driven by volume                                                                                  | Appropriate for firms with significant investment and utilization of automation and technology.                                                                           |

# Problem 01

- Suggested Solution

### Work Breakdown Structure

### **Data Collected**

| Alpha           |           |  |
|-----------------|-----------|--|
| Materials       | Cost (\$) |  |
| Outer Fabric    | \$125,500 |  |
| Lining          | \$8,500   |  |
| Shoulder Straps | \$16,500  |  |
| Pockets         | \$24,500  |  |

| Beta            |           |  |
|-----------------|-----------|--|
| Materials       | Cost (\$) |  |
| Outer Fabric    | \$170,000 |  |
| Lining          | \$12,500  |  |
| Shoulder Straps | \$20,000  |  |
| Pockets         | \$30,500  |  |

| Labour Cost                       | \$<br>7.50 | Per hour |
|-----------------------------------|------------|----------|
| Total monthly backpack production | 10000      | Units    |
| Alpha backpack produced monthly   | 4000       | Units    |
| Beta backpack produced monthly    | 6000       | Units    |

#### **Labor and Overhead Cost**

| Monthly Labor Cost (machine, packing, inspection) | \$125,000 |
|---------------------------------------------------|-----------|
| Monthly Overhead Cost (Rental, Electricity)       | \$85,000  |

#### Detailed breakdown of the overhead and labour cost

| Activity Cost Pools Per Month | Cost Driver              | Overhead<br>Rate (\$/Unit) | •    | Beta<br>(Unit) |
|-------------------------------|--------------------------|----------------------------|------|----------------|
| Operating Machine             | Number of hours          | 7.5                        | 3000 | 2000           |
| Packing                       | Number of hours          | 7.5                        | 4000 | 3600           |
| Inspection                    | Number of hours          | 7.5                        | 1500 | 1250           |
| Space Rental                  | Number of m <sup>2</sup> | 50                         | 800  | 700            |
| Electricity                   | Number of KWH            | 0.8                        | 3250 | 3000           |

### **Conventional Costing**

labour and overhead cost is allocated based on 'Direct Machining Time'

| Total monthly backpack production | 10000 | Units |
|-----------------------------------|-------|-------|
| Alpha backpack produced monthly   | 4000  | Units |
| Beta backpack produced monthly    | 6000  | Units |

|                           | Alpha | Beta |  |
|---------------------------|-------|------|--|
| Operating Machine (hours) | 3000  | 2000 |  |

| Labor and Overnead cost     |           |
|-----------------------------|-----------|
| Monthly Labour Cost         | \$125,000 |
| Monthly Overhead Cost (e.g. | \$85,000  |

| Alpha                   |              |           |
|-------------------------|--------------|-----------|

| Labour Cost             |              |           |
| Labour                  | \$ 75,000.00 | \$ 18.75  |
| OverHead Cost           |              |           |
| OverHead                | \$ 51,000.00 | \$ 12.75  |
| Cost of 1 unit of Alpha |              | \$ 75.25  |

| Beta      |              |
|-----------|--------------|
| Direct Ma | terials Cost |
|           |              |

|                        | l            |                |
|------------------------|--------------|----------------|
| Materials              | Cost (\$)    | Cost/unit (\$) |
| Outer Fabric           | \$170,000    | \$28.33        |
| Lining                 | \$12,500     | \$2.08         |
| Shoulder Straps        | \$20,000     | \$3.33         |
| Pockets                | \$30,500     | \$5.08         |
| Total                  | \$233,000    | \$38.83        |
| Labour Cost            |              |                |
| Labour                 | \$ 50,000.00 | \$ 8.33        |
| OverHead Cost          |              |                |
| OverHead               | \$ 34,000.00 | \$ 5.67        |
| Cost of 1 unit of Beta |              | \$ 52.83       |

125,000 \* 3,000 / (2,000+3,000)

75,000 / 4,000

**85,000 \* 2,000 / (2,000+3,000)** 

34,000 / 6,000

## **ABC** Costing

#### Detailed breakdown of the overhead and labour cost

| Activity Cost Pools Per Month | Cost Driver              | Overhead<br>Rate (\$/Unit) | Alpha<br>(Unit) | Beta<br>(Unit) |
|-------------------------------|--------------------------|----------------------------|-----------------|----------------|
| Operating Machine             | Number of hours          | 7.5                        | 3000            | 2000           |
| Packing                       | Number of hours          | 7.5                        | 4000            | 3600           |
| Inspection                    | Number of hours          | 7.5                        | 1500            | 1250           |
| Space Rental                  | Number of m <sup>2</sup> | 50                         | 800             | 700            |
| Electricity                   | Number of KWH            | 0.8                        | 3250            | 3000           |

| Labour Cost                       | \$ 7.50 | Per hour |
|-----------------------------------|---------|----------|
| Total monthly backpack production | 10000   | Units    |
| Alpha backpack produced monthly   | 4000    | Units    |
| Beta backpack produced monthly    | 6000    | Units    |

Activity based costing using known cost drivers and tracers gives a more detailed and accurate approximation.

#### Alpha (1 Unit)

Lahour Cost

#### **Direct Materials Cost**

| Materials       | Cost (\$) | Cost/unit (\$) |
|-----------------|-----------|----------------|
| Outer Fabric    | \$125,500 | \$31.38        |
| Lining          | \$8,500   | \$2.13         |
| Shoulder Straps | \$16,500  | \$4.13         |
| Pockets         | \$24,500  | \$6.13         |
| Total           | \$175,000 | \$43.75        |

3,000 X \$7.5

800 m<sup>2</sup> X \$50

#### Beta (1 Unit)

#### **Direct Materials Cost**

| Materials       | Cost (\$) | Cost/unit (\$) |
|-----------------|-----------|----------------|
| Outer Fabric    | \$170,000 | \$28.33        |
| Lining          | \$12,500  | \$2.08         |
| Shoulder Straps | \$20,000  | \$3.33         |
| Pockets         | \$30,500  | \$5.08         |
| Total           | \$233,000 | \$38.83        |

| Luboui Cost       |     |           |         |         |
|-------------------|-----|-----------|---------|---------|
| Type of Labour    | Lab | our Cost  | Cost/un | it (\$) |
| Operating Machine | \$  | 22,500.00 | \$      | 5.63    |
| Packing           | \$  | 30,000.00 | \$      | 7.50    |
| Inspection        | \$  | 11,250.00 | \$      | 2.81    |
| Total             | \$  | 63,750.00 | \$      | 15.94   |

#### Labour Cost

| Type of Labour    | Labour Cost |           | Cost/unit (\$) |      |
|-------------------|-------------|-----------|----------------|------|
| Operating Machine | \$          | 15,000.00 | \$             | 2.50 |
| Packing           | \$          | 27,000.00 | \$             | 4.50 |
| Inspection        | \$          | 9,375.00  | \$             | 1.56 |
| Total             | \$          | 51,375.00 | \$             | 8.56 |

Cost Drivers

Cost

**Drivers** 

# Type of Overhead Overhead Cost Cost/unit (\$) Space Rental Cost (m²) \$ 40,000.00 \$ 10.00 Electricity Cost (KWH) \$ 2,600.00 \$ 0.65 Total \$ 42,600.00 \$ 10.65

#### OverHead Cost

| Type of Overhead       | Over | Overhead Cost |    | Cost/unit (\$) |  |
|------------------------|------|---------------|----|----------------|--|
| Space Rental Cost (m²) | \$   | 35,000.00     | \$ | 5.83           |  |
| Electricity Cost (KWH) | \$   | 2,400.00      | \$ | 0.40           |  |
| Total                  | \$   | 37,400.00     | \$ | 6.23           |  |

Cost of 1 unit of Alpha

\$ 70.34

22,500 / 4,000

40,000 / 4,000

Cost of 1 unit of Beta

\$ 53.63

# **Analysis**

| Backpack | Conventional Costing | Activity Based Costing |
|----------|----------------------|------------------------|
| Alpha    | \$75.25              | \$70.34                |
| Beta     | \$52.83              | \$53.63                |

Difference: 75.25 - 70.34 = \$4.91 Difference:

52.83 – 53.63 = -\$0.80

- Cost of Alpha backpack will be overestimated by \$4.90 using Conventional Costing Method compared to Activity Based Costing
- Cost of Beta backpack will be under-estimated by \$0.80 using Conventional Costing Method compared to Activity Based Costing
- ➤ To identify where the differences came from allocation of the labour cost and overhead (indirect cost) between the two types of backpacks.
- Recommend Brian to use Activity Based Costing for better accuracy

# Learning Objectives

- Explain the need for cost estimation
- Classify the common cost terms
- Differentiate between conventional costing with Activity-Based Costing
- Allocate indirect cost using conventional and Activity-Based Costing methods

### E213 Engineering Cost Decisions (Topic Flow)

#### Today's learning

Application of ABC costing method in cost management

Application of different cost estimating techniques

Comparison of alternatives using the concept of equivalence

Alternatives evaluation using single, uniform series and uniform gradient cash flows Evaluate alternatives with different life spans

Evaluate alternatives of equal life spans using payback method

Project evaluation based on Internal Rate of Return and External Rate of Return

Project evaluation using MARR and Equivalent Worth method

Evaluate public projects through incremental B/C analysis

Depreciation estimation and consideration in economic analysis

Tax consideration in economic analysis

Replacement analysis application

Risk and uncertainties handling in economic analysis
